STQA Practical No. 1

Write TEST Scenario for Gmail Login Page

1. AIM

To write test scenarios for the Gmail Login Page to verify its login functionality, input validation, authentication flow, error messages, and navigation.

2. OBJECTIVE

To identify and document functional test scenarios for Gmail sign-in, including valid and invalid email addresses, valid and incorrect passwords, empty input fields, navigation buttons, the Forgot email option, password visibility where available, and appropriate validation messages.

3. TEST SCENARIO DESCRIPTION

This practical identifies the important test scenarios for the Gmail sign-in process and documents the expected behavior of the login page. Gmail uses a multi-step sign-in flow: the email or phone field is shown first, and the password field appears only after an accepted email is entered. Each scenario is written so that a tester can check one behavior at a time, with a clear expected result and priority.

4. GMAIL LOGIN PAGE

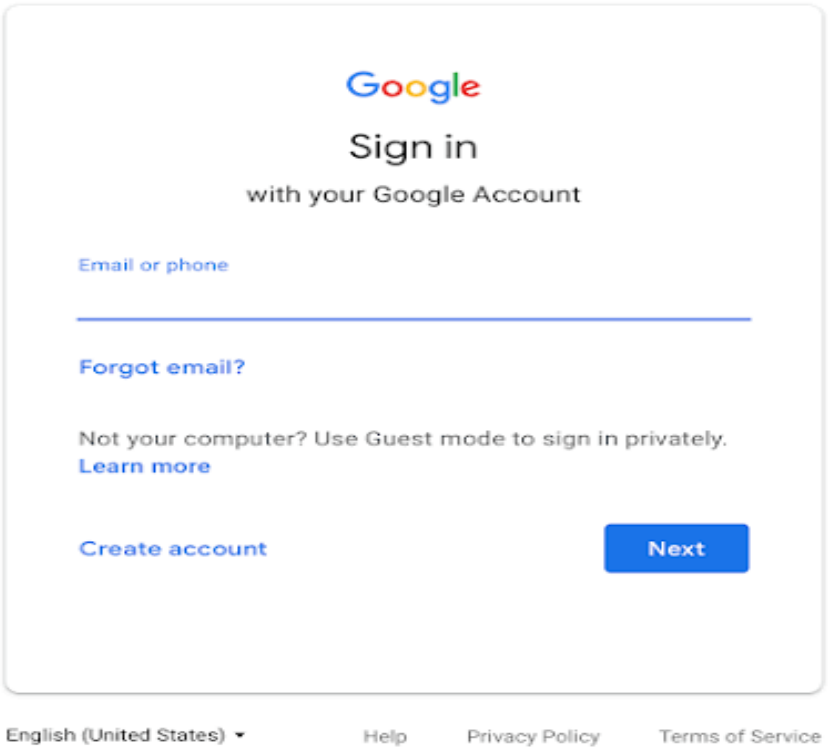

Figure: Sample Gmail Login Page

5. TEST SCENARIO TABLE

S.No.	Test Scenario ID	Test Scenario Description	Expected Result	Priority	Test Status
1	Gmail-TS-01	Verify that the Gmail sign-in page opens successfully.	The sign-in page loads with the title 'Sign in' and no errors.	High	Not Run
2	Gmail-TS-02	Verify that the email/phone input field is displayed.	The 'Email or phone' input field is visible and editable.	High	Not Run
3	Gmail-TS-03	Verify login using a valid registered email address.	The account is accepted and the password step is displayed.	High	Not Run
4	Gmail-TS-04	Verify that the Next button works.	Clicking Next moves the user to the next step of sign-in.	High	Not Run
5	Gmail-TS-05	Verify that the password-entry screen appears after entering an accepted email.	The password field is displayed after the email is accepted.	High	Not Run
6	Gmail-TS-06	Verify login using valid credentials in an authorized test account.	The user is signed in and redirected to the Google Account page.	High	Not Run
7	Gmail-TS-07	Verify behavior when an invalid email address format is entered.	An error such as 'Enter a valid email or phone number' is shown.	High	Not Run
8	Gmail-TS-08	Verify behavior when an unregistered email address is entered.	An error such as 'Couldn't find your Google Account' is shown.	High	Not Run
9	Gmail-TS-09	Verify behavior when the email field is left empty and Next is clicked.	A message such as 'Enter an email or phone number' is shown.	Medium	Not Run
10	Gmail-TS-10	Verify behavior when an incorrect password is entered.	An error such as 'Wrong password' is shown and the user stays on the page.	High	Not Run
11	Gmail-TS-11	Verify behavior when the password field is left empty, where applicable.	A message such as 'Enter a password' is shown.	Medium	Not Run
12	Gmail-TS-12	Verify the Forgot email option.	The account recovery page for finding the email address opens.	Medium	Not Run
13	Gmail-TS-13	Verify the password visibility control, if available.	Clicking the show/hide control toggles the password text.	Low	Not Run
14	Gmail-TS-14	Verify that appropriate validation or error messages appear.	Each invalid input shows a clear, relevant message.	Medium	Not Run
15	Gmail-TS-15	Verify that successful authentication navigates to the appropriate Google account page.	The user lands on the Google Account or Gmail inbox page.	High	Not Run

6. TEST CASE CHART

Test Scenario ID	Gmail-TS-01
Test Case ID	Gmail-TC-01
Test Case Description	Verify that the Gmail sign-in page opens successfully.
Test Priority	High
Pre-Requisite	Internet connection and a supported web browser are available.
Post-Requisite	The sign-in page is displayed correctly.

7.TEST EXECUTION STEPS

S.No.	Action	Inputs	Expected Output	Actual Output	Test Result	Test Comments
1	Open the browser and enter the Gmail address.	https://mail.google.com	Sign-in page is displayed.	Not executed	Not Run	Example steps only
2	Check the email/phone field.	-	Email or phone field is visible.	Not executed	Not Run	Example steps only
3	Enter a valid test email and click Next.	stqa.test@example.com (dummy)	Password step is shown.	Not executed	Not Run	Example steps only
4	Click Next with the email field empty.	(blank)	Empty-field message is shown.	Not executed	Not Run	Example steps only
5	Enter an invalid email format and click Next.	stqa.test@@invalid	Invalid-format message is shown.	Not executed	Not Run	Example steps only
6	Enter an incorrect password and click Next.	Wrong password (dummy)	'Wrong password' error is shown.	Not executed	Not Run	Example steps only
7	Click the show/hide password control.	-	Password text toggles visibility.	Not executed	Not Run	Example steps only
8	Click Forgot email.	-	Account recovery page opens.	Not executed	Not Run	Example steps only

7. RESULT

Fifteen functional test scenarios and one representative test case have been identified and documented for the Gmail Login Page. The scenarios cover page loading, input fields, the multi-step sign-in flow, validation messages, password visibility, Forgot email, and successful navigation. The scenarios have been prepared but not yet executed, so all test statuses are recorded as 'Not Run'.

8. CONCLUSION

Test scenarios help verify that the Gmail login functionality works as expected. They check input validation, error handling, the authentication flow, and navigation. Documenting these scenarios before testing gives a clear, repeatable basis for execution and for reporting defects.
