STQA Practical No. 2

Test Scenario for Gmail Login Page

1. AIM

To prepare test scenarios for the Gmail Login Page so that its login functionality, input validation, authentication flow, error messages, and navigation can be verified.

2. OBJECTIVE

To identify and document functional test scenarios for Gmail sign-in, covering valid and invalid email addresses, valid and incorrect passwords, empty input fields, the Forgot email option, password visibility where available, validation messages, and navigation after successful login.

3. APPLICATION DETAILS

The application under test is the Gmail Login Page of Google's Gmail service. The testing type is Functional Testing, and the scenarios are documented using Microsoft Excel. Gmail uses a multi-step sign-in flow, so the email or phone field is shown first and the password field appears only after an accepted email is entered.

4. TEST SCENARIO DESCRIPTION

This practical describes the test scenarios used to check the Gmail sign-in process. Each scenario checks one behavior of the login page, states the expected result, and is given a priority. The scenarios are written with safe dummy data and authorized test accounts only, so that no real user credentials are exposed.

5. GMAIL LOGIN PAGE SCREENSHOT

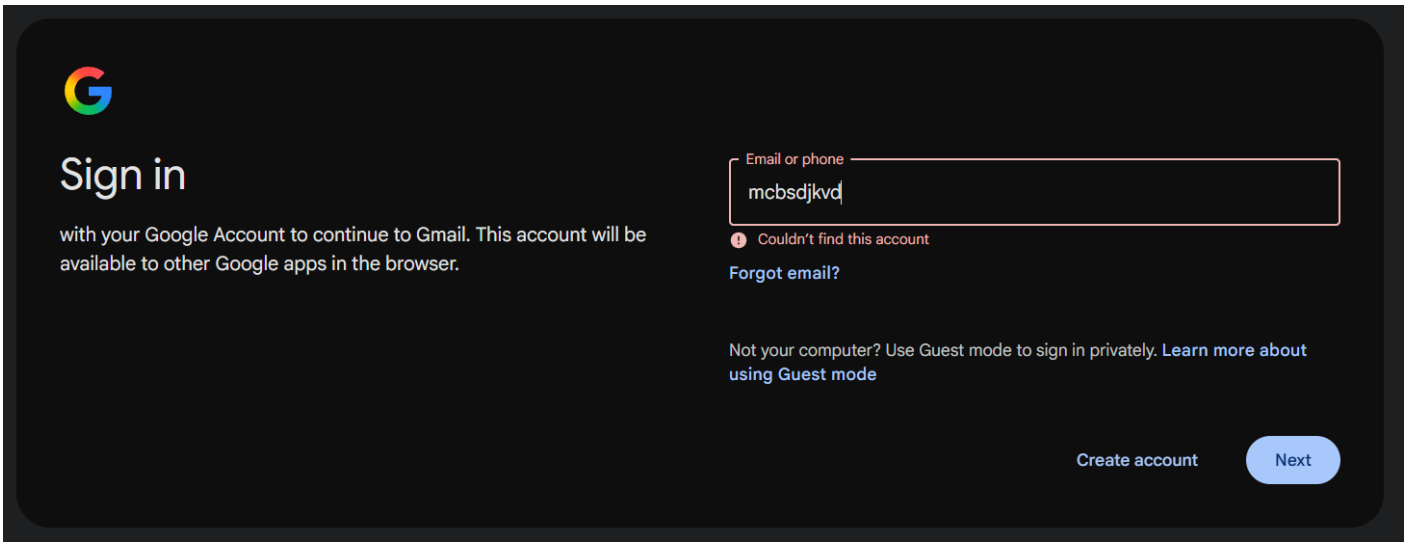

Figure: Sample Gmail Login Page

6. TEST SCENARIO CHART

S.No.	Test Scenario ID	Test Scenario Description	Expected Result	Priority	Test Status
1	Gmail-TS-01	Verify that the Gmail sign-in page opens successfully.	The sign-in page loads with the title 'Sign in' and no errors.	High	Not Run
2	Gmail-TS-02	Verify that the email/phone input field is displayed.	The 'Email or phone' input field is visible and editable.	High	Not Run
3	Gmail-TS-03	Verify login using a valid registered email address.	The account is accepted and the password step is displayed.	High	Not Run
4	Gmail-TS-04	Verify that the Next button works.	Clicking Next moves the user to the next step of sign-in.	High	Not Run
5	Gmail-TS-05	Verify that the password-entry screen appears after entering an accepted email.	The password field is displayed after the email is accepted.	High	Not Run
6	Gmail-TS-06	Verify login using valid credentials in an authorized test account.	The user is signed in and redirected to the Google Account page.	High	Not Run
7	Gmail-TS-07	Verify behavior when an invalid email address format is entered.	An error such as 'Enter a valid email or phone number' is shown.	High	Not Run
8	Gmail-TS-08	Verify behavior when an unregistered email address is entered.	An error such as 'Couldn't find your Google Account' is shown.	High	Not Run
9	Gmail-TS-09	Verify behavior when the email field is left empty and Next is clicked.	A message such as 'Enter an email or phone number' is shown.	Medium	Not Run
10	Gmail-TS-10	Verify behavior when an incorrect password is entered.	An error such as 'Wrong password' is shown and the user stays on the page.	High	Not Run
11	Gmail-TS-11	Verify behavior when the password field is left empty, where applicable.	A message such as 'Enter a password' is shown.	Medium	Not Run
12	Gmail-TS-12	Verify the Forgot email option.	The account recovery page for finding the email address opens.	Medium	Not Run
13	Gmail-TS-13	Verify the password visibility control, if available.	Clicking the show/hide control toggles the password text.	Low	Not Run
14	Gmail-TS-14	Verify that appropriate validation or error messages appear.	Each invalid input shows a clear, relevant message.	Medium	Not Run
15	Gmail-TS-15	Verify that successful authentication navigates to the appropriate Google account page.	The user lands on the Google Account or Gmail inbox page.	High	Not Run

7. TEST CASE CHART

Test Scenario ID	Gmail-TS-01
Test Case ID	Gmail-TC-01
Test Case Description	Verify that the Gmail sign-in page opens successfully.
Test Priority	High
Pre-Requisite	Internet connection and a supported web browser are available.
Post-Requisite	The sign-in page is displayed correctly.

8.TEST EXECUTION STEPS

S.No.	Action	Inputs	Expected Output	Actual Output	Test Result	Test Comments
1	Open the browser and enter the Gmail address.	https://mail.google.com	Sign-in page is displayed.	Not executed	Not Run	Example steps only
2	Check the email/phone field.	-	Email or phone field is visible.	Not executed	Not Run	Example steps only
3	Enter a valid test email and click Next.	stqa.test@example.com (dummy)	Password step is shown.	Not executed	Not Run	Example steps only
4	Click Next with the email field empty.	(blank)	Empty-field message is shown.	Not executed	Not Run	Example steps only
5	Enter an invalid email format and click Next.	stqa.test@@invalid	Invalid-format message is shown.	Not executed	Not Run	Example steps only
6	Enter an incorrect password and click Next.	Wrong password (dummy)	'Wrong password' error is shown.	Not executed	Not Run	Example steps only

7	Click the show/hide password control.	-	Password text toggles visibility.	Not executed	Not Run	Example steps only

9.RESULT

Fifteen functional test scenarios and one representative test case have been prepared for the Gmail Login Page. The scenarios cover page loading, the email and password fields, the multi-step sign-in flow, validation messages, password visibility, Forgot email, and navigation after login. None of the scenarios has been executed yet, so all test statuses are recorded as 'Not Run'.

10.CONCLUSION

Test scenarios help confirm that the Gmail login functionality works correctly. They check input validation, error handling, the authentication flow, and navigation. Preparing these scenarios before testing gives a clear and repeatable basis for execution and for reporting defects.
